

MARK SCHEME for the May/June 2015 series

5054 PHYSICS

5054/22

Paper 2 (Theory), maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2015 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Page 2	Mark Scheme	Syllabus	Paper
	Cambridge O Level – May/June 2015	5054	22

- 1 (a) weight (pulls spring down and causes tension) B1
or force/pull of **gravity**
or mass is in gravitational field
- (b) has a direction B1
- (c) (i) 1 $l = l_0 + e$ or $l_0 = l - e$ or $e = l - l_0$ B1
2 36 cm B1
(ii) curve upwards after 10 N B1
- 2 (a) tape B1
- (b) (i) mass \div volume or mass per unit volume B1
(ii) (V=) $15 \times 0.25 \times 2$ or 7.5 seen C1
2400 kg/m³ A1
(iii) (A=) 15×0.25 or 3.75 or (P=) F/A C1
or (P=) $18\,0000/A$ or (P=) $dgh / \rho gh$ seen A1
48 000 Pa
(iv) (length doubles) so both area **and** weight/force double B1
or area **and** force/weight both increase/larger (in proportion)
or height **and** density the same (in $P = dgh$)
- 3 (a) (i) (efficiency =) useful energy \div input energy C1
or $95\,000/120\,000 (\times 100)$
0.79(17) or 79(.17)% A1
(ii) (P=) energy/time or $90\,000/60$ C1
1500 W A1
- (b) electric kettle **and** B1
• **more** energy/heat **per minute** output/into water/supplied
• more power output
transfers heat/energy faster/at a faster rate
- (c) steam molecules have more potential energy; further apart; smaller force/bonds B1
between molecules; have latent heat; more random arrangement
- 4 (a) (H=) mcT or $330 \times 4.2 \times 13$ C1
18 000 J or 18 020 J or 18 018 J A1

Page 3	Mark Scheme	Syllabus	Paper
	Cambridge O Level – May/June 2015	5054	22

- (b) ice takes in / needs heat / energy B1
- for latent heat
 - to melt / turn to water (at 0 °C) / change state
 - to break bonds / for molecules to gain P.E.
- water (in jug initially at 0 °C) warms up B1
- or ice (and melted water in jug)
- stays at 0 °C / stays cold / stays at constant temp.
 - gives larger temperature difference (between liquid and melting ice in jug)
- (c) metal is a good conductor (of heat) B1
- or metal / can has lower heat capacity
- allow opposite statements for plastic, e.g. plastic is an insulator (of heat),
penalise wrong statements and Physics, e.g. liquid evaporates from can, metals
conduct temperature / convect better
- 5 (a) negative charge moves from hair / person / head to balloon C1
- electrons move from hair / person / head to the balloon A1
- (b) hair is positive (at end) B1
- opposite charges attract B1
- or positive and negative attract
- (c) charges / electrons B1
- don't flow away
 - aren't conducted (to earth / person)
- stay on balloon / on insulator
- (d) any sensible example e.g. photocopier, electrostatic precipitator, flu ash removal,
spray painting, printing, crop spraying, lightning fixes nitrogen in atmosphere etc. B1
- 6 (a) (i) mention of (magnetic) field / flux (of N and S-poles) C1
- (coil/wire) cuts **magnetic** field / flux / lines A1
- or **magnetic flux in coil** changes
- (ii) (one side of) coil cuts one way and then the other B1
- or (side) moves one way and then the other / returns
- or flux increases and then decreases
- (b) increase in emf for both stronger magnets and more turns B1
- no change / same frequency for both stronger magnets and more turns B1
- increase and increase for turn the coil faster B1

Page 4	Mark Scheme	Syllabus	Paper
	Cambridge O Level – May/June 2015	5054	22

- 7 (a) to provide a complete circuit (with live) B1
or to pass current back to mains
or provide a return path for the current
- (b) current/charge/electrons flow to earth/earth wire/ground (when live touches case) B1
fuse melts/blows **and** disconnects circuit/cuts live/stops current B1
- (c) doubly insulated B1
or case/body made of plastic/insulator/not made of metal
or user cannot touch metal
- (d) (circuit breaker) B1
 - turns off/acts fast(er)
 - can be reset
 - easy to see it has tripped/switched
 - can detect small difference between live and neutral currents / small (leakage) current to earth
- 8 (a) left column both 1 B1
right column 0 **and** 1 B1
- (b) (at least one of the atoms) contain same number of electrons and protons B1
or have 1 electron and 1 proton
charge on electron and proton opposite B1
or electron negative **and** proton positive
or charge on electron neutralises/cancels/balances proton charge
neutrons have no charge B1
- 9 (a) number of waves (that pass a point) M1
or number of oscillations (passing a point)
in unit time **or** per second **or** in 1 second A1
- (b) (i) 1.5 cm B1
- (ii) $(v =)f\lambda$ **or** 5×1.5 seen C1
or $(s=)d/t$ **and** $f = 1/t$
7.5 cm/s A1
- (c) (i) wavelength decreases B1
travels a shorter distance in the same time B1
or frequency stays the same (and $v = f\lambda$)

- (ii) wavefronts with smaller wavelength (by eye) B1
 smaller angle to surface (by eye) **and** slanted down B1
 wavefronts join those in shallow water B1

(d) (i)

sound	water
particles / wave / source <ul style="list-style-type: none"> vibrate / oscillate / move in direction of (travel of) wave / along wave move backwards and forwards 	particles / wave / source <ul style="list-style-type: none"> vibrate / oscillate / move at 90° to direction of (travel of) wave move up and down
(contains) compressions and rarefactions or particles come closer / further apart	(contains) crests and troughs
speed 300–330 m/s	wave slower (than sound)

B1
 B1
 one row only

- (ii) method of generating sound, e.g. (loud) speaker (and signal generator) B1
 apparatus that enables refraction clear, e.g. carbon dioxide in balloon or any shape where refraction is possible B1
 method of detecting refraction, e.g. microphone and how it is used to show refraction B1

- 10 (a) (i) 1 S-pole on right of core B1
- 2 N-pole anywhere on vertical section of armature B1
and S-pole anywhere on horizontal section of armature
or
 N-pole on left of vertical section of armature **and** S-pole on right
- (ii) poles (on core) reverse / change positions B1
 (armature still) attracted (to core) B1
- (iii) (iron is a) temporary magnet B1
or (iron) easily demagnetised
or steel retains magnetism
 when current off / no battery / switch off / circuit open B1
and
 armature released / does not stay attracted / opens connections (at AB)

Page 6	Mark Scheme	Syllabus	Paper
	Cambridge O Level – May/June 2015	5054	22

(b) (i)	thermistor	B1
(ii)	resistance (of X) decreases	B1
	current (in coil) increases or more voltage across coil	B1
	and	
	either relay switch closes or circuit (to bell) complete	
(iii) 1	$(V =) IR$ or $1.5 (\times 10^{-3}) \times 2000$	C1
	3(.0)V	A1
2	9(.0)V	B1
3	12/200 or 0.06 (A) or 60 (mA) seen	C1
	or $(R_T =) 195(.12 \Omega)$	
	61(.5) mA or 0.061(5) A or 62 mA or 0.062 A	A1
(iv)	light dependent resistor or LDR	B1
11 (a) (i)	distance (travelled) per second or speed	C1
	distance (travelled) per second / speed in a given direction	A1
	or displacement / time	
	or change in displacement per unit time	
	or displacement (travelled/covered) per unit time	
	or rate of change of displacement	
(ii)	opposite direction	B1
(iii) 1	value seen for v and corresponding value of t	C1
	$0 < t \leq 1.4$ and $0 < v \leq 14$	
	($a =$) $v - u / t$ algebraic or numerical equation	C1
	10 m/s^2	A1
2	sensible comment	A1
(iv) 1	4(.0 s)	B1
2	weight or force due to gravity mentioned (at D)	B1
	mention of	B1
	<ul style="list-style-type: none"> upwards force (on man) from cord tension / elastic force from cord (on man) 	
	force in cord / upward force / tension greater than downwards force	B1
	or resultant force upwards	
(b) (i)	5000	B1
	20 000	B1
(ii)	$(h =) PE / mg$ or $5000 = 50 \times 10 \times h$	C1
	10 m	A1
