# CAMBRIDGE INTERNATIONAL EXAMINATIONS

**GCE Advanced Level** 

### MARK SCHEME for the May/June 2014 series

## 9709 MATHEMATICS

**9709/31** Paper 3, maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

#### **Mark Scheme Notes**

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep\*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol 
   implies that the A or B mark indicated is allowed for work correctly following
   on from previously incorrect results. Otherwise, A or B marks are given for correct work only.
   A and B marks are not given for fortuitously "correct" answers or results obtained from
   incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
  B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

Page 3	Mark Scheme	Syllabus	Paper
	GCE A LEVEL – May/June 2014	9709	31

The following abbreviations may be used in a mark scheme or used on the scripts:

AEF	Any Equivalent Form (of answer is equally acceptable)
AG	Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
BOD	Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO	Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
CWO	Correct Working Only – often written by a 'fortuitous' answer
ISW	Ignore Subsequent Working
MR	Misread
PA	Premature Approximation (resulting in basically correct work that is insufficiently accurate)
sos	See Other Solution (the candidate makes a better attempt at the same question)
SR	Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

#### **Penalties**

- MR −1 A penalty of MR −1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through \"" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR −2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA –1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

	GCE A LEVEL – May/June 2014	9709	31

1 (i) State 
$$\sin 2\alpha = 2\sin \alpha \cos \alpha$$
 and  $\sec \alpha = 1/\cos \alpha$  B1

Obtain  $2\sin \alpha$  B1 [2]

(ii) Use 
$$\cos 2\beta = 2\cos^2 \beta - 1$$
 or equivalent to produce correct equation in  $\cos \beta$  B1  
Solve three-term quadratic equation for  $\cos \beta$  M1  
Obtain  $\cos \beta = \frac{1}{3}$  only A1 [3]

2 State 
$$\frac{du}{dx} = 3\sec^2 x$$
 or equivalent B1

Express integral in terms of 
$$u$$
 and  $du$  (accept unsimplified and without limits) M1

Obtain 
$$\int \frac{1}{3} u^{\frac{1}{2}} du$$

Integrate 
$$Cu^{\frac{1}{2}}$$
 to obtain  $\frac{2C}{3}u^{\frac{3}{2}}$  M1

Obtain 
$$\frac{14}{9}$$
 A1 [5]

3 Obtain 
$$\frac{2}{2t+3}$$
 for derivative of x B1

Obtain 
$$\frac{5}{(2t+3)^2}$$
 or unsimplified equivalent

Obtain 
$$t = -1$$

Use 
$$\frac{dy}{dx} = \frac{dy}{dt} / \frac{dx}{dt}$$
 in algebraic or numerical form

Obtain gradient 
$$\frac{5}{2}$$
 A1 [6]

Obtain 
$$k \ln \left(2 + e^{3x}\right)$$

Use 
$$y(0) = 36$$
 to find constant in  $y = A(2 + e^{3x})^k$  or  $\ln y = k \ln(2 + e^{3x}) + c$  or equivalent M1\*

Obtain equation correctly without logarithms from 
$$\ln y = \ln \left( A \left( 2 + e^{3x} \right)^k \right)$$
 \*M1

Obtain 
$$y = 4(2 + e^{3x})^2$$
 A1 [6]

Page 5	Mark Scheme	Syllabus	Paper
	GCE A LEVEL – May/June 2014	9709	31

5 (i) Either Multiply numerator and denominator by 
$$\sqrt{3} + i$$
 and use  $i^2 = -1$  M1

Obtain correct numerator 
$$18+18\sqrt{3}i$$
 or correct denominator 4 B1

Obtain 
$$\frac{9}{2} + \frac{9}{2}\sqrt{3}i$$
 or  $(18 + 18\sqrt{3}i)/4$ 

Obtain 
$$9e^{\frac{1}{3}\pi i}$$
 A1 [5]

Obtain moduli and argument 18 and 
$$\frac{1}{6}\pi$$
 or 2 and  $-\frac{1}{6}\pi$ 

or moduli 18 and 2 or arguments 
$$\frac{1}{6}\pi$$
 and  $-\frac{1}{6}\pi$  (allow degrees)

Obtain 
$$18e^{\frac{1}{6}\pi i} \div 2e^{-\frac{1}{6}\pi i}$$
 or equivalent A1

Obtain 
$$9e^{\frac{1}{3}\pi i}$$
 A1 [5]

(ii) State 
$$3e^{\frac{1}{6}\pi i}$$
, following through their answer to part (i) B1

State 
$$3e^{\frac{1}{6}\pi i \pm \frac{1}{2}\pi i}$$
, following through their answer to part (i)

B1

Obtain 
$$3e^{-\frac{3}{6}\pi i}$$

Obtain 
$$(4x - 5)^2(x + 1) = 27$$

Obtain given equation correctly 
$$16x^3 - 24x^2 - 15x - 2 = 0$$
 A1 [3]

(ii) Obtain 
$$x = 2$$
 is root or  $(x - 2)$  is a factor, or likewise with  $x = -\frac{1}{4}$ 

Divide by 
$$(x-2)$$
 to reach a quotient of the form  $16x^2 + kx$  M1  
Obtain quotient  $16x^2 + 8x + 1$  A1

Obtain 
$$(x-2)(4x+1)^2$$
 or  $(x-2)$ ,  $(4x+1)$ ,  $(4x+1)$ 

(iii) State 
$$x = 2$$
 only A1 [1]

7 (i) Obtain 
$$2x - 3y + 6z$$
 for LHS of equation B1  
Obtain  $2x - 3y + 6z = 23$  B1 [2]

Obtain unsimplified value 
$$\frac{\pm 23}{\sqrt{2^2 + (-3)^2 + 6^2}}$$
, following answer to (i) A1

Obtain 
$$\frac{23}{7}$$
 or equivalent A1 [3]

	Pa	ge 6	Mark Scheme	Syllabus	F	aper
			GCE A LEVEL – May/June 2014	9709		31
		<u>OR 1</u>	Use scalar product of $(4, -1, 2)$ and a vector normal to the p	lane	M1	
			Use unit normal to plane to obtain $\pm \frac{(8+3+12)}{\sqrt{49}}$		A1	
			Obtain $\frac{23}{7}$ or equivalent		A1	[3]
		<u>OR 2</u>	Find parameter intersection of $p$ and $\mathbf{r} = \mu (2\mathbf{i} - 3\mathbf{j} + 6\mathbf{k})$		M1	
			Obtain $\mu = \frac{23}{49}$ [and $\left(\frac{46}{49}, -\frac{69}{49}, \frac{138}{49}\right)$ as foot of perpendicu	lar]	A1	
			Obtain distance $\frac{23}{7}$ or equivalent		A1	[3]
	(iii)	<u>Either</u>	Recognise that plane is $2x - 3y + 6z = k$ and attempt use of a perpendicular distance to plane at least once	formula for	M1	
			Obtain $\frac{ 23-k }{7} = 14$ or equivalent		A1	
		OD	Obtain $2x - 3y + 6z = 121$ and $2x - 3y + 6z = -75$	-4.14	A1	[3]
		<u>OR</u>	Recognise that plane is $2x - 3y + 6z = k$ and attempt to find point on q using l with $\lambda = \pm 2$	at least one	M1	
			Obtain $2x - 3y + 6z = 121$ Obtain $2x - 3y + 6z = -75$		A1 A1	[3]
8	(i)	-	$v = \csc x$ for at least $0, x, \pi$		B1	
		•	$y = x(\pi - x)$ for at least 0, x, $\pi$		B1	
		Justify s	tatement concerning two roots, with evidence of 1 and $\frac{1}{4}\pi^2$	for <i>y</i> -values		
		on graph via scales			B1	[3]
	(ii)	Use cos	$ecx = \frac{1}{\sin x}$ and commence rearrangement		M1	
		Obtain g	given equation correctly, showing sufficient detail		A1	[2]
	(iii)		e the iterative formula correctly at least once tain final answer 0.66		M1 A1	
		Sho	ow sufficient iterations to 4 decimal places to justify answer of	or show a		[2]
		S	ign change in the interval (0.655, 0.665)		A1	[3]
		<b>(b)</b> Obt	tain 2.48		B1	[1]

Page 7	Mark Scheme	Syllabus	Paper
	GCE A LEVEL – May/June 2014	9709	31

9 (i) Either State or imply partial fractions are of form  $\frac{A}{3-x} + \frac{B}{1+2x} + \frac{C}{(1+2x)^2}$  B1

Use any relevant method to obtain a constant

M1

Obtain A = 1

Obtain  $B = \frac{3}{2}$  A1

Obtain  $C = -\frac{1}{2}$  A1 [5]

Or State or imply partial fractions are of form  $\frac{A}{3-x} + \frac{Dx + E}{(1+2x)^2}$  B1

Use any relevant method to obtain a constant

Obtain A = 1Obtain D = 3M1

A1

A1

Obtain E = 1A1
[5]

(ii) Obtain the first two terms of one of the expansion of  $(3-x)^{-1}$ ,  $\left(1-\frac{1}{3}x\right)^{-1}$ 

 $(1+2x)^{-1}$  and  $(1+2x)^{-2}$  M1

Obtain correct unsimplified expansion up to the term in  $x^2$  of each partial fraction, following in each case the value of A, B, CA1 $\sqrt[h]{}$ A1 $\sqrt[h]{}$ 

Obtain answer  $\frac{4}{3} - \frac{8}{9}x + \frac{1}{27}x^2$  A1 [5]

[If A, D, E approach used in part (i), give M1A1 $^{\land}$ A1 $^{\land}$  for the expansions, M1 for multiplying out fully and A1 for final answer]

10 (i) Use of product or quotient rule M1

Obtain  $-5e^{-\frac{1}{2}x}\sin 4x + 40e^{-\frac{1}{2}x}\cos 4x$  A1

Equate  $\frac{dy}{dx}$  to zero and obtain  $\tan 4z = k$  or R  $\cos(4x \pm \alpha)$  M1

Obtain  $\tan 4x = 8 \text{ or } \sqrt{65} \cos \left(4x \pm \tan^{-1} \frac{1}{8}\right)$ 

Obtain 0.362 or 20.7° A1
Obtain 1.147 or 65.7° A1 [6]

(ii) State or imply that x-coordinates of  $T_n$  are increasing by  $\frac{1}{4}\pi$  or  $45^\circ$ 

Attempt solution of inequality (or equation) of form  $x_1 + (n-1)k\pi$ . 25

Obtain  $n > \frac{4}{\pi} (25 - 0.362) + 1$ , following through on their value of  $x_1$ 

n = 33 A1 [4]
