READ THESE INSTRUCTIONS FIRST

The teacher responsible for preparing the examination is not allowed to consult the question paper before the examination. Teachers should, as part of the preparation of the examination requirements, carry out any tests indicated on page 2 in order to satisfy themselves that the supplied materials are satisfactory.

The standard Report Form to be included with the scripts is given on pages 7 and 8. Please detach and enclose it with the scripts. If scripts are despatched in more than one envelope, it is essential that a copy of the Supervisor’s Results and of the Report Form are sent inside each envelope.

More material may be issued if required, without penalty, but this should not be necessary. Safety spectacles may be provided if considered necessary.

Supervisors are advised to remind candidates that all substances in the examination should be treated with caution. Please also see under ‘General Apparatus’ on the use of pipette fillers and safety goggles.

In accordance with COSHH (Control of Substances Hazardous to Health) Regulations, operative in the UK, a hazard appraisal of the examination has been carried out.

Attention is drawn, in particular, to certain materials used in the examination. The following codes are used where relevant.

- **C** = corrosive substance
- **H** = harmful or irritating substance
- **N** = harmful to the environment
- **F** = highly flammable substance
- **O** = oxidising substance
- **T** = toxic substance

Hazard data sheets should be available from your suppliers.

If you have any queries regarding these Instructions, please contact CIE
by e-mail: International@cie.org.uk,
by phone: +44 1223 553554,
by fax: +44 1223 553558,
stating the Centre number, the nature of the query and the syllabus number quoted above.
For Question 1

Each candidate will require

(a) one 50 cm$^3$ measuring cylinder

(b) one 50 cm$^3$ burette

(c) one or more 250 cm$^3$ conical flasks

(d) 100 cm$^3$ of aqueous sodium thiosulfate, Na$_2$S$_2$O$_3$.5H$_2$O, of concentration 25 g / dm$^3$, labelled solution F

(e) 100 cm$^3$ of aqueous sodium thiosulfate, Na$_2$S$_2$O$_3$.5H$_2$O, of concentration 12.5 g / dm$^3$, labelled solution G

A small volume of aqueous sodium hydroxide should be added to the above two solutions to ensure they are not acidic. 3 cm$^3$ of 1.0 mol / dm$^3$ sodium hydroxide per 1 dm$^3$ of solution F and solution G should be sufficient.

(f) 100 cm$^3$ of aqueous potassium iodate, KIO$_3$, of concentration 1 g in 250 cm$^3$ of solution labelled potassium iodate

(g) access to water and distilled water

(h) one 10 cm$^3$ measuring cylinder

(i) a white tile

[H] (j) approximately 30 cm$^3$ of aqueous sulfuric acid of concentration 1 mol / dm$^3$

(k) approximately 10 cm$^3$ of 4 g / dm$^3$ starch solution, labelled starch solution

(l) two 1 g samples of solid potassium iodide, KI, in test-tubes labelled potassium iodide

20 cm$^3$ of aqueous potassium iodate + 1 g of solid potassium iodide + 5 cm$^3$ of 1M sulfuric acid should require approximately 45 cm$^3$ of solution G for the end point.
For Question 2

Each candidate will require

(a) a stoppered test-tube, containing about 10 cm³ of aqueous copper sulfate of concentration 0.1 mol / dm³, labelled liquid H

(b) a corked test-tube, containing about 5 cm³ of cyclohexane, labelled liquid J

(c) pH indicator papers and pH chart

(d) distilled water

(e) splints

(f) rack of test-tubes

(g) cork or bung to fit test-tubes

(h) two dry watch glasses

(i) aqueous sodium hydroxide of concentration 1 mol / dm³

(j) aqueous barium nitrate of sufficient concentration to give a positive sulfate test

(k) aqueous nitric acid of concentration 1 mol / dm³

(l) aqueous ammonia of concentration 1 mol / dm³

(m) one 10 cm³ measuring cylinder

(n) a Bunsen burner and matches

(o) teat pipettes

Labels do not need to include concentrations.
THE SUPERVISOR’S REPORT IS ON PAGES 7 AND 8
THE SUPERVISOR'S REPORT IS ON PAGES 7 AND 8
This form must be completed and returned in the envelope with the scripts.

REPORT ON PRACTICAL CHEMISTRY

NOVEMBER 2011

1  (a) Supervisor's Results

   It is recommended that the Supervisor should be a chemistry teacher.

   The Supervisor is asked to carry out the experiments in Questions 1 and 2 and to record the results on a spare copy of the question paper clearly labelled 'Supervisor’s Results'. Failure to enclose these results and this report form may lead to candidates being unavoidably penalised.

(b) The candidate numbers of candidates in each session were:

   First session                   Second session
2 The Supervisor is invited to report details of any difficulties experienced by candidates giving names and candidate numbers. The report should include reference to:

(a) any general difficulties encountered in making preparations for the examination;

(b) difficulties due to faulty apparatus or materials;

(c) accidents to apparatus or materials.

Other cases of individual hardship, e.g. illness, temporary disability, should be reported direct to UCLES on the normal Application for Special Consideration form.
